TIL

Today I Learned

- Why mastering GNU/Linux is fundamental skill for a physicist
- The philosophy of GNU/Linux
- How to develop a program in C that interacts with the command line
- How to redirect output and how to use the pipe
- How to search in a file
- How to deal with a table
- How to interact with a remote server

Homework

- Install a GNU /Linux distribution (Ubuntu, ElementaryOS, Fedora, . . .)
- Install, if not already present, a `C` compiler, as `gcc`
- Write a C progam that takes in input an integer number N and print the sum from 0 to N
- Test it saving the output in text files
- Expand `random.c` to check that the minimum is small than the maximum
